Planting Tips

Large, deciduous trees planted on your property will provide cooling shade in the summer and when the leaves fall off, allow warm sunlight to enter your home during the winter.

- Tree species with round, horizontal oval and vase-shaped crowns when mature offer the best shading potential.
- High-wide-crowned deciduous trees provide the best shade.
- Before digging, always remember to call Digger's Hotline.
- Trees should be planted 25—35 feet from the area to be shaded.
- Do not plant trees near underground pipelines or wires, septic tanks, or overhead utility lines.
- Do not plant a large tree closer than 5 feet from a driveway or sidewalk, it could eventually push up the concrete.
- Do plant trees to shade roofs, windows, porches, air conditioning units or other areas of heat gain.
